SRE Tiger PMS

Investing in Emerging Leaders Across India's Growth Sectors.

Portfolio Management Services

About Us

- We are an equity-focused investment firm built on deep domain knowledge of the founding team, combining bottom-up research with a robust, process-driven investment framework.
- Founded in 2023, we operate with a small, high-conviction team of 6+ young professionals from diverse backgrounds, enabling fast-paced decision making, quick portfolio actions and high accountability.
- The core team brings 20+ years of cumulative experience in Indian equity markets across products, blending institutional-grade rigour with a modern, tech-enabled research and execution style.
- We manage equity assets across Portfolio Management Services (PMS), bespoke advisory mandates and select offshore structures
- Our listed equity offering targets superior risk-adjusted returns using a clear three-bucket approach – **Diversified, Concentrated and Thematic** – combining growth, value and contrarian ideas across cycles.
- We design customized wealth strategies for individuals, families and businesses where our research and network can add meaningful value.

Unique TIGER Framework

T	Tailwinds	We focus on sectors where structural demand and policy support create long runways for growth. For example, renewables, defence or railways where government capex, incentives and regulation drive multi-year visibility.
I	In-Depth Research	Every idea is backed by detailed bottom-up work on business model, management, balance sheet and governance. This includes plant visits, channel checks and competitor benchmarking before we deploy capital.
G	Growth Potential	We prefer businesses with large or expanding markets, scalable models and clear levers for operating leverage. For instance, a niche manufacturing company adding capacity, or a consumer brand scaling from one region to a national footprint.
E	Earnings Visibility	We look for companies with strong order books, recurring revenues and predictable cash flows rather than one-off windfalls. Example: industrials with long-term contracts, or financials with stable, granular loan books.
R	Risk Mitigation	We protect downside through diversification, position sizing, quality filters and strict sell disciplines. For example, we avoid over-leveraged balance sheets, limit exposure to single names or themes, and cut positions when governance or numbers deteriorate.

Our Investment Approach

1

Core Compounders

We own high-quality businesses with durable moats, clean governance and long growth runways, bought at reasonable valuations. The intent is to hold through cycles and let earnings compounding drive the bulk of returns.

2

Catalyst Triggers

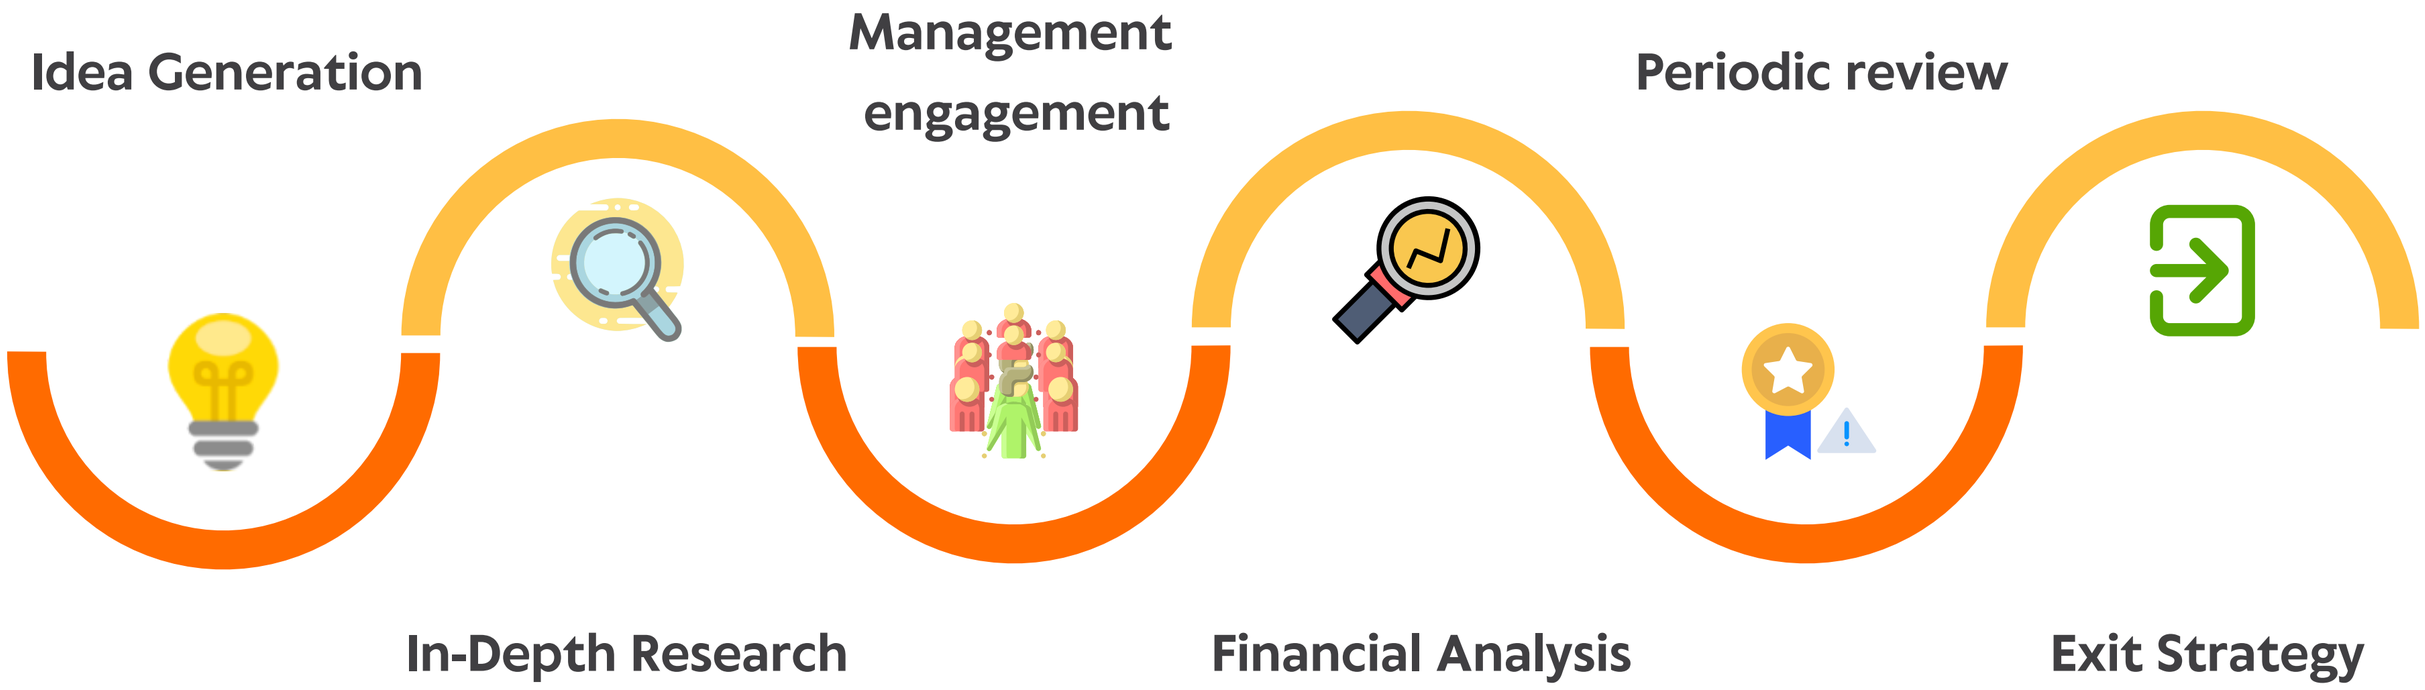
We combine value investing with timing around clear catalysts – policy changes, sector up-cycles, capex ramps, turnarounds or re-ratings.
Examples: defence, railways and select manufacturing themes since 2022.

3

Capital Protection

“Return of capital” comes before “return on capital.” We focus on downside risk via margin of safety, conservative position sizing, liquidity filters and strict exit rules, so drawdowns are contained even when markets turn volatile.

Disciplined Process for Stock Selection



Risk management: how we try to make the ride survivable?

We can't remove volatility, but we can control exposure and quality. We cap single-name exposure, avoid leverage-heavy balance sheets and opaque governance,and follow an explicit sell discipline so that risk is acted on, not discussed in hindsight.

Played out: the thesis or valuation has run its course → we exit or trim.
When a stock moves from "undervalued with triggers ahead" to "fully valued with limited upside," we start taking money off the table.

Example: if we buy a niche engineering company at 12–13x earnings with a strong orderbook, and over 18–24 months earnings double and the stock re-rates to 28–30x, we typically trim or exit even if the business remains good—the upside from there rarely compensates for the downside if anything goes wrong.

Broken: governance or balance sheet deteriorates → we exit quickly.
We track auditor changes, pledging, working-capital stretch and related-party transactions. If the facts change, we don't "average down," we walk away.

Example: in the past we have exited a mid-cap where receivable days spiked and management started guiding aggressively while cash flows lagged; the stock fellfurther later, but our capital was already protected.

Better use of capital: a higher-IRR idea emerges → we recycle.
Even a decent holding can become a "source of funds" if we find a clearly superior risk-reward elsewhere.

Example: we may move capital from a steady consumer business compounding at 12–15% annually into a manufacturing/exports name where capacity is coming onstream and we expect 20%+ earnings CAGR over the next 3–5 years with similar downside risk.

Risk control: position, sector or liquidity looks stretched → we reduce.
We keep hard checks on single-stock weight, sector concentration and daily liquidity. If any of these breach our internal bands, we cut exposure irrespective of how much we "like" the story.

Example: if a stock has rallied sharply and grows to 8–10% of the portfolio or if a sector (say capital goods or financials) crosses our comfort band, we trim it back to size and redeploy into under-owned, high-quality names, keeping the portfolio balanced.

A Snapshot Of Portfolio Construction

15-20 stocks (when fully invested)

Sector / Theme agnostic

Combination of structural growth and sustainable valuations

Flexible to straddle entire market cap curve

Medium to low churn

Multi factor risk management matrix

Bottom up security selection

Key Industry Megatrends

Premiumisation
Riding the aspirational consumption

Urbanisation
Transforming economic landscape

Formalisation
Shift from unorganised to organised

Manufacturing Renaissance
Plugging the missing peg in the GDP

Financialisation
Savings shift from physical to financial assets

Rising exports
Part of critical global value chain

Digitisation
Set for exponential growth to US$800 billion by 2030

India's Diverse Wealth Creation Landscape

Structural Opportunities

- Current leaders
- Consistent growth
- Benefitting from macros
- Demand/Supply Mismatch

Disruptive Opportunities

- New businesses challengers & disrupting status quo
- Benefitting from innovation

Emerging Opportunities

- Emerging leaders
- Niche businesses & changing scale/trajectory
- Beneficiaries of megatrends/tailwinds

Special Opportunities

- Change in regulations
- Technology shifts
- Change in promoters/management
- Change in market structure
- Business model transformation
- Change in balance sheet
- Corporate action - merger/ demerger
- New products launches

Govt thrust creating sectoral opportunities

Defense Modernization

India's defense sector is undergoing significant modernization, with orders worth ₹2,00,000 crore expected by 2030. The "Atmanirbhar Bharat" initiative drives self reliance, allocating 68% of the FY24 defense budget to domestic procurement. Defense exports are targeted to reach ₹41,500 crore by 2025, up from ₹12,450 crore in FY23. The sector presents robust growth in manufacturing and R&D, aiming to establish a strong indigenous defense ecosystem.

Railway Expansion

The National Rail Plan envisions expanding railway capacity by 2030 to support growth projections until 2050. Freight modal share is set to rise from 26% to 45%, while high speed rail projects, such as the Mumbai-Ahmedabad bullet train, will transform passenger travel. With a record INR 2.4 lakh crore capex allocation for FY24, India targets becoming a global leader in railway infrastructure, aiming for a 100% electrified broad gauge network by 2030.

Renewable Energy

India targets achieving 500 GW of nonfossil fuel based energy capacity by 2030, aligning with its commitments under the Paris Agreement. Policy initiatives like the National Green Hydrogen Mission and Offshore Wind Energy targets are driving investments worth INR 20 lakh crore into solar, wind, and hydroelectric power. The government’s aim is to reduce carbon intensity by 45% and achieve net zero by 2070.

Biofuel Industry

India's biofuel sector is set to achieve a 20% ethanol blending target by 2025 and 25% by 2030 under the National BioEnergy Mission. The government is investing INR 35,000 crore in biorefineries and feedstock technologies. By 2030, the biofuel industry is expected to reduce India’s crude oil imports by 15% and cut greenhouse gas emissions by 30%, bolstering the country’s energy security and sustainability goals.

Shipbuilding Industry

The Maritime India Vision 2030 targets India’s rise as a global shipbuilding leader, increasing gross tonnage to 500k GT and tripling the ship repair industry to ₹12,000-₹15,000 crore. Green shipping initiatives, including hybrid propulsion incentives and hydrogen retrofitting, are key drivers. Indian shipyards foresee ₹2,80,000 crore in opportunities over 15 years, with ₹1,80,000 crore from defense and ₹100,000 crore from commercial shipbuilding. The ship repair market is set to grow to ₹16,000-₹20,000 crore annually by 2030, supported by fleet upgrades and conversions.

Indian market trading relatively at cheaper valuation than developed markets, but at a premium to EM.

Raghav Chaudhary – Founder, Tiger Assets

RAGHAV CHAUDHARY

- Raghav Chaudhary is a visionary Founder of Tiger Assets, a Mumbai based financial services firm that has rapidly grown under his leadership, having served over 1,500 investors in the past 5 years.
- An alumnus of the Lala Lajpatrai Institute of Management, Raghav brings a strong academic foundation in asset management, complemented by hands on entrepreneurial drive.
- Specialising in investment banking and fundraising, he has successfully closed more than a dozen pre and post listing transactions in the past 2 years.
- With over five years of fund management experience, Raghav is known for combining rigorous, data driven research with ground level validation, supported by a robust network of dealer,distributors, consultants, and finance professionals.
- His influence extends well beyond his firm; he sits on multiple advisory boards, has been featured on ET Now, and has appeared as the youngest investor on MoneyTV, where he shares his perspective on opportunities in the small and micro cap segments.
- As a recognized finfluencer with 70,000+ followers on X (Twitter), Raghav has built a strong digital presence, regularly sharing actionable insights on equity markets and the financial ecosystem. Beyond markets, he also mentors founders and promoters, helping them navigate capital markets more effectively and build long term value.

Fund Manager Profile

ANSHUL MITTAL

- Anshul Mittal, Fund Manager at Tiger Fund, brings over half a decade of dedicated experience in the financial industry. He has played a pivotal role in scaling a leading Portfolio Management Services (PMS) firm to over ₹800 crore in Assets Under Management (AUM).
- Anshul specializes in identifying high growth opportunities across small, mid, and micro cap segments while adhering to a disciplined, risk managed investment approach. His expertise lies in crafting and executing strategies that balance optimized returns with risk mitigation, ensuring sustainable wealth creation for clients.
- Strategic Investment Expertise: Deep understanding of diverse sectors and emerging investment themes.
- Growth at a Reasonable Price (GARP): Proven success in identifying growth opportunities at attractive valuations.
- Risk Management: A formal approach to portfolio construction with balanced exposure across high risk, stable, and new age companies with primary focus on valuations.
- Anshul believes that success in the financial industry stems from informed decision making, disciplined strategies, and collaborative engagement. His focus is on helping investors navigate market complexities while fostering long term wealth creation.

Tiger Fund Fee Structure

Investment Corpus	Fixed Fees	Fulcrum Fee on Alpha	High Watermark	Exit Load
₹50 lakh to ₹1 crore	1.5%	35% over benchmark	Yes	1%
₹ 1 crore to ₹5 crore	1.5%	25% over benchmark	Yes	1%
Above ₹5 crore	1%	20% over benchmark	Yes	1%

Performance Fees = Fulcrum Fees (also known as Incentive Fees)

Key Features:

- Performance/Fulcrum Fees: 25% performance fees applicable only on returns exceeding the benchmark.
- Fixed Fee: A competitive 1.5% annual fixed fee for portfolio management.
- The High Watermark Principle is your shield against double dipping, fees apply only to fresh profits, ensuring you pay for performance, not repeats!
- Cost Efficient: Even post the performance fee, the cost is efficient compared to industry alternatives.

Why Our Structure Stands Out:

Lower Fees Than Industry Standards:

- "While the industry typically charges 12.5% performance fees and 1% fixed fees, our structure of 25% performance fees over alpha (benchmark) and 1.5% fixed fees often results in lower total fees compared to other players."

Tiger Fund Fee Structure

Performance Based Fees on True Alpha

Clients pay fees only on returns exceeding the benchmark return **(BSE 500 TRI)**, ensuring fees are tied to genuine outperformance, not average market moves.

Lower Fees, Higher Gains

No "hurdle rate" gimmicks. Fees apply only on excess returns, reducing the drag on your portfolio and boosting compounding potential.

Aligned Incentives

Our success = your success. Fees are directly linked to delivering alpha, creating a win-win partnership.

Simple, Transparent, Fair

No complex math, just clear. Easy to understand fee calculations based on performance above the benchmark.

More Gains in Your Pocket

By avoiding unnecessary charges on benchmark level returns, clients retain more for long term wealth growth.

Weathering Market Volatility

In choppy markets, fees kick in only for meaningful outperformance, helping you preserve more during uncertain times.

Alpha Driven Strategy

We chase absolute outperformance, not just hurdle rate gains, ensuring an active approach aligned with your goals.

Fulcrum Fees: Transparent & Aligned

Our Fee Structure

- **Fixed Fee:** 1.5% of portfolio value
- **Fulcrum Fee:** 25% on returns exceeding the benchmark (Alpha)

How It Works

- **Benchmark:** BSE 500 Total Return Index (TRI) with 10% return
- **Portfolio Performance:** 15%
- **Excess Return (Alpha):** 15% - 10% = 5%
- **Fulcrum Fee:** 25% of 5% = 1.25%
- **Total Fee Charged:** 1.5% Fixed + 1.25% Fulcrum = 2.75%

Why This Benefits Clients

- **Fair & Aligned:** Pay only for outperformance beyond the benchmark.
- **Incentive for Alpha:** Encourages managers to focus on maximizing client gains.
- **Transparent & Simple:** No complex hurdle rates or hidden charges.

Fee Structure

- **Fixed Fees:** Incurred on a semi annual basis.
- **Fulcrum Fees:** Levied annually at the end of the year. In the event of a redemption within the year, the fee will be adjusted proportionally based on the holding period.

Key Terms

Particulars	Tiger Fund
Platform	Portfolio Management Services
Minimum Ticket Size	INR 50 Lakhs
Tenure	4-5 Years
Exit Load	Exit within 24 months-1%, After 24 months-NIL

*Benchmark is BSE 500 Total Return Index (TRI)

Comparison of Fee Structures

Parameter (Example)	Tiger Fund' Fee Structure	Industry Standard
Initial Investment	₹1,00,00,000	₹1,00,00,000
Benchmark Return	20%	20%
Hurdle Rate	BSE 500 TRI Performance	8%
Portfolio Return	25%	25%
Performance Fee Calculation	25% on alpha over 20% benchmark	20% on return above 8% hurdle
Total Fees	₹2,37,500	₹4,20,000

Competitive Fees Structure- Maximizing client value

Index Return	Fund Return	Tiger Fund' Total Fees	Industry Standard Total Fees	Savings
20%	30%	3,62,500	5,20,000	+1,57,500
20%	50%	8,62,500	9,20,000	+57,500
30%	25%	1,50,000	4,20,000	+2,70,000
30%	50%	6,12,500	9,20,000	+3,07,500

Assuming Investment amount of 1 Cr and invested for full 1 year.

Testimonials

Vishal Bhargava

They have demonstrated a credible record in identifying sound companies that have been ignored or undervalued due to corporate and market events. Their ability to look through the noise and singularly focus on the key aspects in a company make them a fine stock-picker. I wish them all the very best in their future endeavours. Columnist-CNBC/Moneycontrol, Ex-CLSA/ET

Abhishekh Agarwal

Amazing stock picking skills which is evident by the mind-blowing returns that some of their recent picks have given to their investor friends. They have unique ability of picking small cap ideas through their thorough research. Their ability to be always on top of things is Outstanding. I have no doubt that their stellar performance would continue. Partner SRBC & Co LLP

Sachin Arora

Rarely you come across people, who have high depth understanding of business, financial understanding and mindset of an investor! They have been genuinely checking all boxes. I have seen my portfolio booming because of their guidance and being member of your prime batch! Keep up the good show and don't forget to include me in your product for momentum investment!
